

## USING A COLLAPSIBLE COOLER

### EASY STEPS TO FOLLOW

**Step 1** Pull a flat cooler and shipping box from the case. Set aside the box and unattached top.

**Step 2** Grab the top of the Styrofoam at the TWO reference dots and pull apart to shape the cooler into a box. Square up the corners as shown below.

**Step 3** Align the bottom and insert the formed cooler into the box. Fold back the liner bag and pack with product.

**Step 4** If using coolant, place it at the top. Fold over the integrated liner bag, set the top in place, then seal the box and ship.
